1 this year marks the l0 h anniversary of the ifip international workshop on protocols for high speed networks pfhsn it began in may 1989 on a hillside overlooking lake zurich in switzerland and arrives now in salem massachusetts 6 000 kilometers away and 10 years later in its sixth incarnation but still with a waterfront view the atlantic ocean in between it has visited some picturesque views of other lakes and bays of the world palo alto 1990 san francisco bay stockholm 1993 baltic sea vancouver 1994 the strait of georgia and the pacific ocean and sophia antipolis i nice 1996 the mediterranean sea pfhsn is a workshop providing an international forum for the exchange of information on high speed networks it is a relatively small workshop limited to 80 participants or less to encourage lively discussion and the active participation of all attendees a significant component of the workshop is interactive in nature with a long history of significant time reserved for discussions this was enhanced in 1996 by christophe diot and w allid dabbous with the institution of working sessions chaired by an animator who is a distinguished researcher focusing on topical issues of the day these sessions are an audience participation event and are one of the things that makes pfhsn a true working conference

in two editions spanning more than a decade the electrical engineering handbook stands as the definitive reference to the multidisciplinary field of electrical engineering our knowledge continues to grow and so does the handbook for the third edition it has grown into a set of six books carefully focused on specialized areas or fields of study each one represents a concise yet definitive collection of key concepts models and equations in its respective domain thoughtfully gathered for convenient access combined they constitute the most comprehensive authoritative resource available circuits signals and speech and image processing presents all of the basic information related to electric circuits and components analysis of circuits the use of the laplace transform as well as signal speech and image processing using filters and algorithms it also examines emerging areas such as text to speech synthesis real time processing and embedded signal processing electronics power electronics optoelectronics microwaves electromagnetics and radar delves into the fields of electronics integrated circuits power electronics optoelectronics electromagnetics light waves and radar supplying all of the basic information required for a deep understanding of each area it also

devotes a section to electrical effects and devices and explores the emerging fields of microlithography and power electronics sensors nanoscience biomedical engineering and instruments provides thorough coverage of sensors materials and nanoscience instruments and measurements and biomedical systems and devices including all of the basic information required to thoroughly understand each area it explores the emerging fields of sensors nanotechnologies and biological effects broadcasting and optical communication technology explores communications information theory and devices covering all of the basic information needed for a thorough understanding of these areas it also examines the emerging areas of adaptive estimation and optical communication computers software engineering and digital devices examines digital and logical devices displays testing software and computers presenting the fundamental concepts needed to ensure a thorough understanding of each field it treats the emerging fields of programmable logic hardware description languages and parallel computing in detail systems controls embedded systems energy and machines explores in detail the fields of energy devices machines and systems as well as control systems it provides all of the fundamental concepts needed for thorough in depth understanding of each area and devotes special attention to the emerging area of embedded systems encompassing the work of the world s foremost experts in their respective specialties the electrical engineering handbook third edition remains the most convenient reliable source of information available this edition features the latest developments the broadest scope of coverage and new material on nanotechnologies fuel cells embedded systems and biometrics the engineering community has relied on the handbook for more than twelve years and it will continue to be a platform to launch the next wave of advancements the handbook s latest incarnation features a protective slipcase which helps you stay organized without overwhelming your bookshelf it is an attractive addition to any collection and will help keep each volume of the handbook as fresh as your latest research

this textbook presents computer networks to electrical and computer engineering students in a manner that is clearer more interesting and easier to understand than other texts all principles are presented in a lucid logical step by step manner as much as possible the authors avoid wordiness and giving too much detail that could hide concepts and impede overall understanding of the material ten review questions in the form of multiple choice objective items are provided at the end of each chapter with answers the review questions are intended to cover the little tricks which the examples and end of chapter problems may not cover they

serve as a self test device and help students determine how well they have mastered the chapter

this work contains the proceedings of the sixth iee conference on telecommunications there are 52 papers altogether
